Home – Desktop (> 800 px)

Two columns: sidebar 280–380 px (map fills the height) + content column. Page max width 1200 px, 16 px padding.

Footer: data source link · API docs link

Legend

1. Day card (link) → opens `forecast.html?city=<id>&day=<date>` in the same tab
2. "More details →" → `forecast.html?city=<id>` (starts on the first day)

Wireframe: grayscale, no real data. X boxes = icons/images; chart shapes are placeholders. Black circles = interactive elements.

Home – Mobile (≤ 800 px)

One column. The sidebar moves to row 2, so current / 48 h / 7 days come before location + map. Chart 220 px, map 300 px.

Location

City dropdown ▾

Footer: data source link · API docs link

Legend

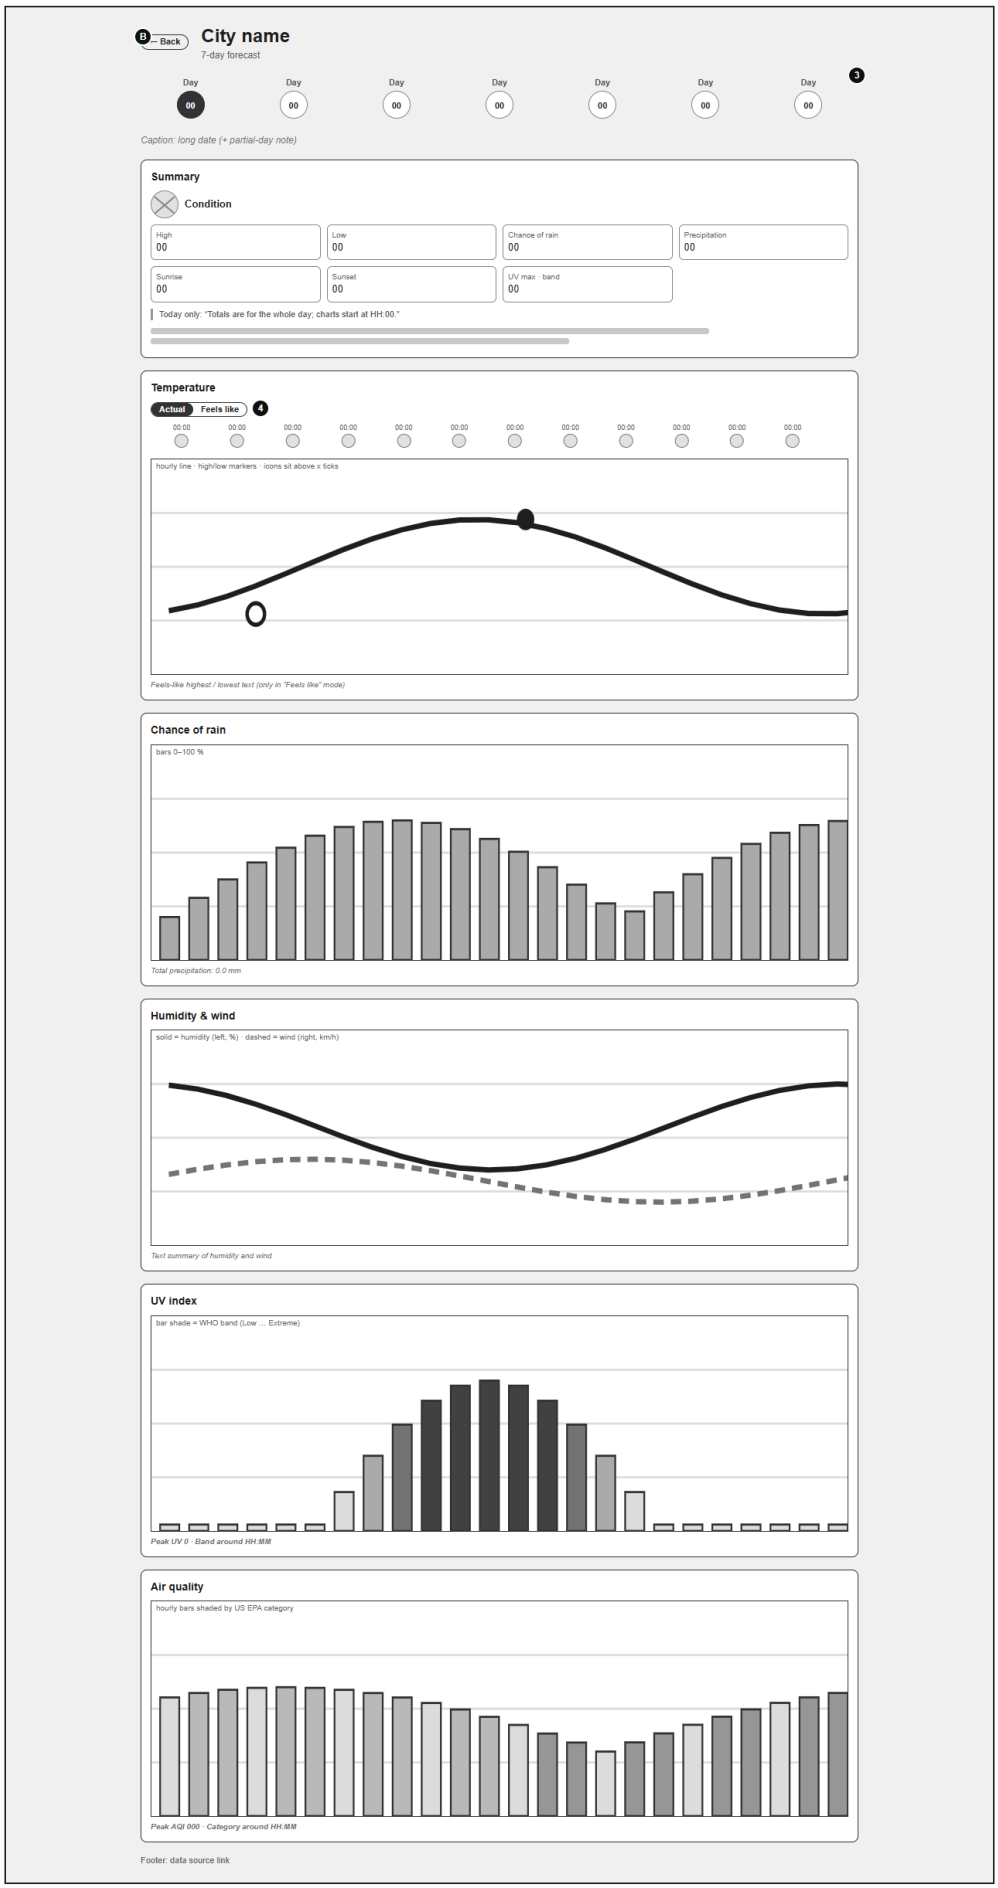

(1) Day card (link) → opens `forecast.html?city=<id>&day=<date>` in the same tab

(2) "More details →" → `forecast.html?city=<id>` (starts on the first day)

Wireframe: grayscale, no real data. X boxes = icons/images; chart shapes are placeholders. Black circles = interactive elements.

Forecast page – Desktop

Single centred column, max width 960 px, 16 px padding. Summary stats 4 per row (4 + 3). Charts 280 px high.

Legend

- B Back → `index.html?city=<id>` (same tab; the browser Back button also works)
- 3 Day bar = tablist: click or ← → Home End; the selected day is written to `?day=` with replaceState
- 4 Actual / Feels like toggle (aria-pressed); the chart updates in place

Cards, top to bottom: Summary, Temperature, Chance of rain, Humidity & wind, UV index, Air quality.

Wireframe: grayscale, no real data. X boxes = icons/images; chart shapes are placeholders. Black circles = interactive elements.

Forecast page – Mobile (≤ 800 px)

Same order, full width. Summary stats 2 per row. Charts 220 px high; hour icons every 4th hour on narrow charts.
